

Coding & Solution

Date	4 July 2026
Team ID	
Project Name	Credit Card Approval Predication
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://mantadaanandkumar-anand.github.io/CreditcardApprovalprediction/ https://mantadaanandkumar-anand.github.io/CreditcardApprovalprediction/
Programming Language(s)	Python, HTML, CSS, JavaScript
Framework(s) Used	Flask, Scikit-learn, Bootstrap, Pandas, NumPy, Matplotlib

Key Features Implemented	Data preprocessing, Exploratory Data Analysis (EDA), Feature engineering, Machine Learning model training, Credit card approval prediction, Flask web application, Model evaluation, GitHub repository integration.
Pending / Incomplete Features	No major pending features. Future enhancements include cloud deployment, user authentication, database integration, and real-time prediction support.
Setup / Run Instructions	1. Install Python 3.10+. 2. Install dependencies using <code>pip install -r requirements.txt</code>. 3. Run the application using <code>python app.py</code>. 4. Open the displayed local URL (e.g., <code>http://127.0.0.1:5000</code>) in a web browser. 5. Enter applicant details and click Predict to view the approval result.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project follows a modular architecture with separate files for preprocessing, model training, prediction, and the Flask web application. The source code is version-controlled using Git and hosted on GitHub. Proper coding standards, documentation, and error handling have been implemented to ensure maintainability and reliability.
