

Code-Layout, Readability and Reusability

Date	30 June 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the quality of the codebase in terms of its structure, readability, and reusability. Well-organized code with proper naming conventions, comments, and modular design ensures that the project is maintainable and can be extended or reused in future development.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform spacing and indentation maintained throughout the code.	Yes	Uniform indentation maintained throughout the project.
2	Proper File Structure	Files and folders are logically organized into appropriate directories.	Yes	Project organized into Dataset, Models, Source_Code, Templates, Static, Documentation, etc.
3	Meaningful Variable Names	Variables are named clearly to reflect their purpose.	Yes	Variables such as income, loan_amount, credit_score, prediction_result clearly describe their purpose.
4	Function / Method Names	Functions and methods are descriptively named based on their functionality.	Yes	Functions like preprocess_data(), train_model(), predict_approval() are descriptive.
5	Code Comments	Inline and block comments explain important logic and code sections.	Yes	Important logic and complex sections are documented with comments.
6	Modular Design	Code is divided into reusable functions and modules.	Yes	Data preprocessing, training, prediction, and Flask app are separated into different modules.
7	No Redundant Code	Duplicate or unused code has been removed to improve maintainability.	Yes	Duplicate code removed using reusable functions.
8	Error Handling	Exceptions and errors are handled gracefully using appropriate techniques.	Yes	Input validation and exception handling implemented using try-except blocks.

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technolog	Where Reused	Reusability Level (High / Medium / Low)
1	Data Preprocessing Module	Python	Training & Prediction	High

2	Feature Engineering Module	Python	Model Training	High
3	Prediction Module	Python, Flask	Web Application	High
4	HTML Templates	HTML, Bootstrap	All Web Pages	High
5	Utility Functions	Python	Entire Project	Medium

Overall Code Quality Assessment:

Aspect	Rating (1-5)	Comments
Code Layout & Structure	5	Well-organized project structure with separate folders for each component.
Readability	5	Clear naming conventions and consistent coding style
Reusability	5	Reusable modules minimize duplication and simplify maintenance.
Documentation / Comments	5	Adequate comments and supporting documentation provided.
Overall Score	5/5	Professional, maintainable, and scalable codebase.
