

Solution Architecture

Date	29 June 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Solution Architecture Diagram:

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer. Fill in the specific technologies and components for your project directly into the boxes to create your architectural diagram.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Provides a web interface for users to enter applicant details and view prediction results.	HTML5, CSS3, Bootstrap, JavaScript
Flask Application Server	Receives user requests, validates inputs, communicates with the ML model, and returns prediction results.	Python, Flask
ML Prediction Engine	Processes applicant data and predicts whether the credit card application will be approved or rejected.	Scikit-learn, Pandas, NumPy, Joblib

Authentication Service	Manages user login and session security (if implemented).	Flask Session / Flask-Login
External Tools	Hosts the application and manages source code.	IBM Cloud, GitHub
Data / Storage Layer	Stores dataset, trained machine learning model, and prediction records.	CSV Dataset, Pickle (.pkl), Joblib
