

Project Initialization and Planning Phase

Date	28 June 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Define Problem Statements:

Many applicants are unsure whether they meet the eligibility criteria for credit card approval before submitting their application. The approval process depends on multiple factors such as income, employment status, age, credit history, and financial background, making it difficult for applicants to predict the outcome. This uncertainty can lead to rejected applications, wasted time, and frustration. The proposed Credit Card Approval Prediction System uses Machine Learning to analyze applicant data and predict the likelihood of approval, helping users make informed decisions before applying.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A customer applying for credit card.	Get my Credit Card application approved quickly.	I don't know whether I meet the bank's eligibility criteria.	My income credit history, and other details affect the approval decision.	Uncertain about whether my application will be approved
